

## IPTEGO announces IPTComm 2009 sponsorship

Berlin, July 6, 2009 – IPTEGO announces its sponsorship for IPTComm 2009 in Atlanta, Georgia, USA July 7, 8. The focus of the IPTComm conference is to serve as a forum for experts to share their ideas, views, results and experiences in the field of IP-based telecommunication with a focus on security and services issues. Professionals and executives from both the data communications and the telecommunications industry, Government agencies and members of the business community will discuss topics such as “Principles, Systems and Applications of IP Telecommunications” and “Services and Security for Next Generation Networks”.

IPTEGO’s CEO Alexander Hoffmann explains: “We felt it important to sponsor IPTComm as the IP telecommunication systems continues to be a rapidly changing field which will continue to grow in relevance as companies’ transition from legacy SS7 to IP based technology and networks. IPTEGO’s PALLADION will play an important role in this migration and transition. The PALLADION creates end to end visibility on a SIP or IMS based network, is able to detect fraudulent use and security breaches - in real time - and is able to proactively and automatically trigger devices and applications to “self heal” a network. IPTEGO’s products and technologies will continue to play an integral part in improving revenues, customer quality of experience and lowering of operational expenses in SIP and IMS networks now and into the foreseeable future revenue assurance, we need to be well informed. IPTEGO aims for being a part of tomorrows developments.”

**IPTEGO'S PRODUCT:**

### Company Profile: IPTEGO

IPTEGO is a Berlin based company which develops innovative software solutions for SIP and IMS based networks. IPTEGO’s PALLADION product represents over 200 years of SIP development experience and is used to monitor, manage and control SIP based networks for large nationwide service providers as well as small regional ITSPs today. PALLADION helps customers lower operating expenses, improve customer satisfaction and improve revenues through features and functions that reduce revenue leakage and fraud detection – all in real time. PALLADION is available today as software only based solution or as an easily installed appliance. Operators visibility into what is happening on the network, enables them to detect problems and issues in real time, and gives them the ability to trigger events in the network automatically solve problems.
